Technology Protection

Phil Robinson is the Founder and Managing Director of National Security Support Services, LLC, where he advises companies on the establishment and governance of compliant U.S. defense programs, with emphasis on FOCI mitigation, classified operations, export control compliance and space systems cybersecurity implementation.

A senior executive and board advisor with over 30 years of leadership across aerospace, defense, and regulated technology environments, Phil brings deep expertise in governance, risk oversight, mission assurance, and strategic execution for complex, high reliability organizations.

Phil is a recognized subject matter expert and thought leader in foreign defense acquisitions, with Department of Defense recognition for leading complex security, risk, and technology-protection programs. He is widely known for shaping U.S. national security policy and for building multi domain security and risk frameworks for government, aerospace, and defense organizations operating under FOCI mitigation.

He previously served as Vice President, Chief Security Officer, and Deputy Risk Officer at Maxar Technologies, where he oversaw multiple FOCI mitigation agreements, secured facility clearances, and led U.S. Government negotiations enabling multibillion dollar acquisitions and the domestication of foreign businesses.

Phil also served as an industry representative on the National Industrial Security Program Policy Advisory Committee and was routinely engaged by senior leaders within OUSD(I) and the Defense Counterintelligence and Security Agency on critical national security matters.

Phil Robinson brings rare board level expertise in national security, FOCI mitigation, and enterprise risk governance, enabling boards to confidently oversee regulated defense and aerospace programs while protecting enterprise value and mission execution.
